

## A way to mod an HV generator by TOTO4G

This is a guide to change the high voltage polarity of **AppliedKiloVolts** model HP1N.

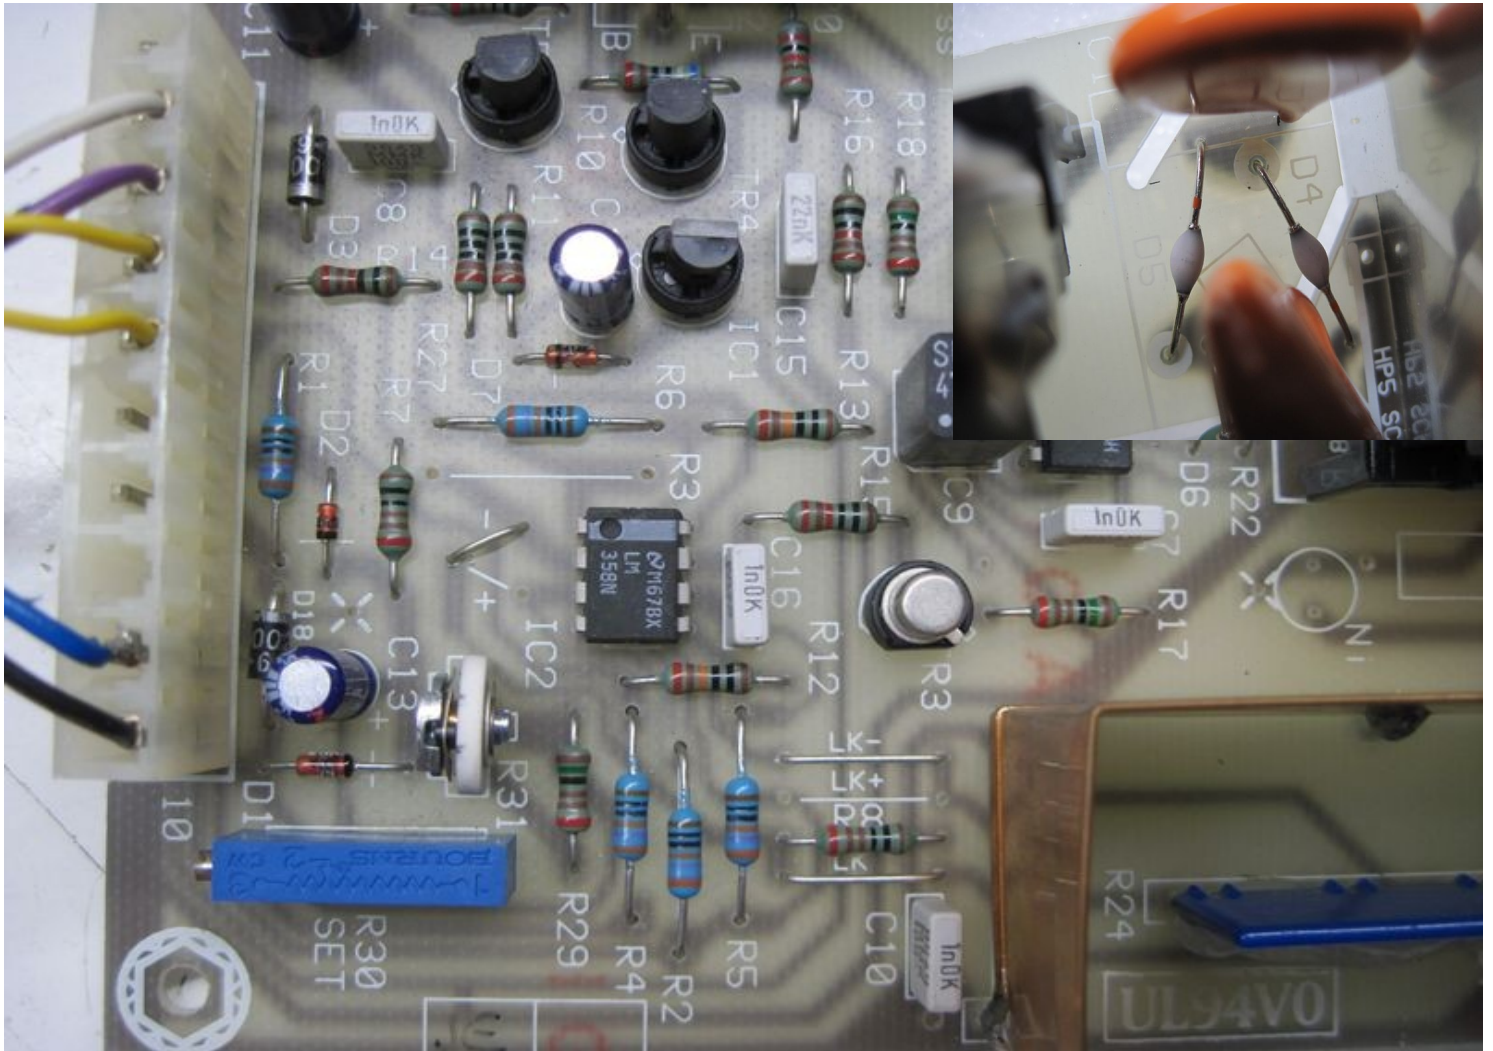

Photo original position of component, HP1N negative HV

procedure:

- 1) reversing the HV diodes D4 and D5
- 2) swap link - to + close IC2
- 3) swap link LK- to LK+
- 4) remove R2
- 5) put removed R2 in the R3 position
- 6) replace all the capacitors for safety

new model after this mod is HP1P positive HV  
take a look at the web site <http://www.appliedkilovolts.com/>  
for find high-quality products

good luck  
TOTO4G

My thanks to robert8rpi from GCE and Mr Edwards from AK, for support.
